NOTICE

The project that is the subject of this report was a part of the Program for Applied Research in Airport Security (PARAS), managed by Safe Skies and funded by the FAA.

The members of the technical panel selected to monitor this project and to review this report were chosen for their special competencies and with regard for appropriate balance. The report was reviewed by the technical panel and accepted for publication according to procedures established and overseen by Safe Skies.

The opinions and conclusions expressed or implied in this report are those of the individuals or organizations who performed the research and are not necessarily those of Safe Skies or the FAA.

Safe Skies and the FAA do not endorse products or manufacturers.
NATIONAL SAFE SKIES ALLIANCE, INC.

National Safe Skies Alliance (Safe Skies) is a non-profit organization that works with airports, government, and industry to maintain a safe and effective aviation security system. Safe Skies’ core services focus on helping airport operators make informed decisions about their perimeter and access control security.

Through the ASSIST (Airport Security Systems Integrated Support Testing) Program, Safe Skies conducts independent, impartial evaluations of security equipment, systems, and processes at airports throughout the nation. Individual airports use the results to make informed decisions when deploying security technologies and procedures.

Through the POST (Performance and Operational System Testing) Program, Safe Skies conducts long-term evaluations of airport-owned equipment to track and document a device or system’s performance continuously over its life cycle.

Through PARAS (Program for Applied Research in Aviation Security), Safe Skies provides a forum for addressing security problems identified by the aviation industry.

A Board of Directors and an Oversight Committee oversee Safe Skies’ policies and activities. The Board of Directors focuses on organizational structure and corporate development; the Oversight Committee approves PARAS projects and sets ASSIST Program priorities.

Funding for our programs is provided by the Federal Aviation Administration.
PROGRAM FOR APPLIED RESEARCH IN AIRPORT SECURITY

The Program for Applied Research in Airport Security (PARAS) is an industry-driven program that develops near-term practical solutions to security problems faced by airport operators. PARAS is managed by Safe Skies, funded by the Federal Aviation Administration, and modeled after the Airport Cooperative Research Program of the Transportation Research Board.

Problem Statements, which are descriptions of security problems or questions for which airports need guidance, form the basis of PARAS projects. Submitted Problem Statements are reviewed once yearly by the Safe Skies Oversight Committee, but can be submitted at any time.

A project panel is formed for each funded Problem Statement. Project panel members are selected by Safe Skies, and generally consist of airport professionals, industry consultants, technology providers, and members of academia—all with knowledge and experience specific to the project topic. The project panel develops a request of proposals based on the Problem Statement, selects a contractor, provides technical guidance and counsel throughout the project, and reviews project deliverables.

The results of PARAS projects are available to the industry at no charge. All deliverables are electronic, and most can be accessed directly at www.sskies.org/paras.

AUTHOR ACKNOWLEDGMENTS

The research conducted for this guidebook was performed under PARAS 0029 by Aviation Security Consulting, Inc. with the assistance of TransSolutions, LLC.

Lori Beckman of Aviation Security Consulting, Inc. was the Principal Investigator for the project and primary author of the guidebook. Gloria Bender, Andy Entrekin, and Jessica Gafford assisted with the research and data collection.

The research team would like to acknowledge the airports who took time out of their busy schedules to help make this guidebook robust and useful to all sized airports. It is only through the support of airports that Safe Skies is able to continue to provide the aviation industry with valuable research on practical airport-related topics. Finally, the research team wants to thank the panel of volunteers who lent their expertise and time to ensuring the guidebook would be useful and applicable.

SUMMARY

This document provides step-by-step guidance and reference material for individuals who conduct and adjudicate criminal history records checks (CHRC) required under 49 CFR §§ 1542.209 and 1544.229.

Since the implementation of the CHRC requirement in 1997, there have been few changes or updates to regulations or guidance documents. This has led many in the aviation industry to seek additional guidance to ensure:

- The CHRC process aligns with the present-day threat environment
- Additional issues are considered to address potential vulnerabilities
- Individuals conducting and adjudicating CHRCs are properly trained

These issues and others are addressed in this guidance.

Some airports have elected to exceed the minimum federal regulations based on their local environment or past incidents. This guidebook provides an overview of the current regulations, along with suggestions and guidance for those airports and air carriers that want to exceed the minimum federal requirements, to provide a more comprehensive vetting process for their employees and subsidiary employees.

Over 200 US airports and numerous air carriers were contacted during this research. The research team performed surveys, interviews, and literature reviews. Other industries that vet their employees were also reviewed to determine if their practices might benefit the aviation industry. Some of the key findings identified during the research include:

- Many airports and air carriers are subject to additional state, local, and in some cases tribal regulations and laws
- Parties may not fully understand the categories of crimes
- Methods to adjudicate potentially disqualifying CHRC results differ among airports
- Rap Back adjudication procedures should be established prior to implementing the program
- Airports and air carriers should work closely with their local legal counsel when adjudicating applicants’ criminal histories

Airports of any type and size can apply the information in this guidance.

SECTION 1: BACKGROUND

Airports and domestic air carriers are required to conduct fingerprint-based criminal history records checks (CHRC) on applicants seeking unescorted access to the SIDA. Airport operators are also required to submit applicants’ biographic information for a Security Threat Assessment (STA), which includes multiple database checks conducted by the TSA. The TSA’s most recent guidance on CHRCs, issued in 2004, is attached as Appendix B.

49 CFR §§ 1542.209 and 1544.229 include a list of criminal offenses that disqualify a convicted applicant or current employee from receiving an airport ID badge that authorizes unescorted access to the SIDA. An applicant is denied a SIDA badge if they have been convicted of any one of those crimes, or found not guilty by reason of insanity, within the past 10 years. An applicant who has been issued a security badge is required to self-report any disqualifying criminal convictions.

As of July 2020, this list contains 28 disqualifying crimes and has only been expanded once since implementation of the requirement. It represents the minimum disqualifiers, or the baseline. Some airports choose to exceed the federal regulations and impose more rigorous screening and vetting standards in accordance with the laws of their specific jurisdictions.

The research revealed an overall belief that the list of disqualifying crimes should be expanded and the 10-year look-back period increased. Additionally, local authorities face considerable challenges in obtaining criminal history record information (CHRI) beyond the fingerprint-based CHRC in the absence of a federal requirement.

Congress recognized some of these issues in the FAA Extension, Safety, and Security Act of July 2016. The act, in part, directs the TSA to propose rulemaking that would expand the look-back period to 15 years. It also requires the TSA to issue a notice of proposed rulemaking (NPRM) to update the disqualifying crimes list. As of this publication, the TSA has not issued an NPRM to update 49 CFR §§ 1542.209 and 1544.229.

Based on concerns expressed by aviation industry representatives during project research, this document offers suggestions and guidance to airports and air carriers to assist them in complying with or exceeding the current federal minimum requirements.

A glossary of common terms used in the vetting process can be found in Appendix A.

DOCUMENT FLOW

This guidebook moves step-by-step through the CHRC process. The following icons are used throughout the document to call attention to important information:

- Best practice is a successful process implemented at a US airport. It is provided with the intent that other airport operators or air carriers may find it useful in their environment.

- Recommendations are based on the authors’ research and experience with airport badging and adjudicating. Recommendations could be applicable to all airport sizes and types.

- Training opportunities are suggestions to enhance existing training programs or additional training that may improve the CHRC or vetting process.
Caution icons warn the reader of potential legal or regulatory issues. Where a caution note is provided, airport operators or air carriers should consider seeking legal guidance.

Quotation boxes are direct quotes received from the airport operator or air carrier surveys.

Application Process

In order to obtain an airport ID badge, an applicant must first complete an application form. Most airports provide fillable PDF application forms on their website, since handwritten forms may be difficult to interpret and data entry errors can cause processing delays. Applicants must provide information about their background and whether they have committed any of the 28 disqualifying crimes listed in the federal regulations. Some airports provide a paper copy of a disqualifying crimes declaration form. The applicant makes the appropriate selections, and then signs and dates the form.

A growing number of airports use an electronic database or system, such as an Identity Management System (IDMS), to collect the badging application information and disqualifying crimes attestation from the applicant. If so, the badging application information may be entered by the Authorized Signatory via an online portal. The disqualifying crimes form is usually filled out by the applicant, either through a secure link sent by the Authorized Signatory or during the fingerprinting process using a tablet in the credentialing office. The use of a system like IDMS reduces the risk of missing information by preventing the application from moving forward until all the required fields have been completed. It also minimizes some types of data entry errors. However, these systems are costly and may not be feasible for all airports.

Authorized Signatories should be trained to assist applicants with the application process and review the application for missing information before it is submitted to reduce processing delays.

When asked about existing processes or lessons learned regarding disclosure and release forms, most airports indicated that they followed the current Security Directive (SD) language. However, many airports have modified their badge application forms to include additional language, which often involves suitability clauses. Examples of additional language collected during airport outreach can be found in Appendix D.

Verification of Identity and Work Authorization Documents

Following the requirements in 49 CFR §§ 1542.209 and 1544.229, an airport operator’s Trusted Agents or an air carrier staff member must verify the identity of the applicant through two forms of identification prior to fingerprinting, and ensure that the printed name on the CHRC application is legible. At least one of the two forms of identification must have been issued by a government authority, and at least one must contain a photograph. Form I-9 shows the US Citizenship and Immigration Service (USCIS) list of acceptable documents that can be presented by the applicant. Go to www.uscis.gov/i-9 for the most current version.
Airport operators are required to examine the documents to determine whether they appear to be genuine and relate directly to the individual presenting them. Some airports do not accept all documents included on the Form I-9 list because they are either unable to authenticate the document presented by the applicant or their staff cannot identify all the documents listed, since some documents on the list are obscure and rarely used.

Training on properly identifying the documents listed in Form I-9 is available at no cost from many airports’ federal or state partners. These agencies are often willing to assist airports in authenticating documents that are presented by badge applicants.

Airport operators should make every effort to provide ongoing training, focusing on the documents listed in Form I-9, for their Trusted Agents to comply with the TSA regulations and SD requirements.

Inaccurate application of requirements may result in improper processes. For example, although a passport generally is considered excellent proof of identity and work authorization, individuals may present a variety of other documents in place of a passport, and personnel should be trained to verify the authenticity of each document on the Form I-9.

Remember to check for updates to the Form I-9 list, which happen periodically, to ensure you are always using the most up-to-date document.

Since the security features in most government documents have improved significantly over recent years, US Customs and Border Protection (CBP) officers have noted an increasing trend of legitimate/genuine documents being presented by imposters at major airports. The types of fraudulent or deceptive identity issues experienced by local CBP are often an indicator of what the credentialing office may experience as well.

It is important for airport operators and air carriers to recognize the potential for the use of genuine documents presented by imposters in the credentialing process, and the need to develop policies and procedures to handle a potential imposter who presents genuine documents. Airports that have developed such procedures often have agreements with law enforcement agencies onsite to provide support to the credentialing staff in verifying the authenticity of the documents and the identity of the individual presenting them.

Many federal agencies can provide local imposter recognition and fraudulent documentation training to Trusted Agents to assist with this issue.

**E-Verify and SAVE**

Airport operators have access to the USCIS’s E-Verify system and Systematic Alien Verification for Entitlements (SAVE) system to help determine the eligibility of individuals seeking unescorted access to SIDA.

E-Verify is an internet-based system through which employers verify the employment eligibility of their applicants before hire. In short, employers submit information taken from a new hire’s Form I-9 through E-Verify to the Social Security Administration and USCIS to determine whether the information matches government records, and whether the new hire is authorized to work in the United States.

The E-Verify website ([www.uscis.gov/e-verify](http://www.uscis.gov/e-verify)) provides a host of information about the program, as well as specific user manuals, quick reference guides, and information on employee rights and employer obligations.
The SAVE program does not determine eligibility for benefits—including airport ID badges—but it does verify immigration status for use in determining such eligibility. Thousands of federal, state, and local agencies use the SAVE program.

According to TSA, some agencies use a web services connection to directly download SAVE electronic responses into their adjudication systems, but most end users access the SAVE website through a secure log-in, enter certain data points, and receive immigration verification status electronically within seconds. Most verification is completed on the first step. If not, SAVE institutes further verification, requesting any additional information needed. The additional information is then reviewed by USCIS “status verifiers” and a verification result is generally provided within 3–5 days. USCIS provides training on how to use SAVE and can provide training to individual airports if requested.

### CHRC Overview

Once an applicant completes the application process, the CHRC begins. The CHRC system specified for airport and air carrier use is the Triple I system, which is an automated information system used to exchange criminal history records and related information between federal, state, and local criminal justice agencies, and is managed by the FBI.

There are other state-managed or privately run systems for accessing CHRI, but the FBI-managed system is required for issuance of airport ID badges. Understanding the CHRC system used by airports and air carriers is critical for identifying the strengths and limitations of the current system.

With the initial regulatory requirement for background checks in 1997, airports and air carriers were given latitude to determine how the requirements would be implemented. Therefore, the CHRC methodology varies by airport and may include:

- Fingerprinting and adjudicating every employee, including air carrier employees covered under the air carrier regulation
- Fingerprinting air carrier employees, but submitting the CHRC to the Designated Aviation Channeler (DAC) under the air carrier’s submitting number so that the air carrier receives the results and can adjudicate the CHRC
- Only fingerprinting those under airport responsibility per 49 CFR § 1542 and requiring the air carriers to manage the entire process for their covered employees

If air carriers are required to manage the process for their covered employees, they primarily adjudicate CHRCs at the corporate headquarters level and provide local stations with case numbers to submit to the airport. This confirms to the airport that the air carrier has determined the results of a fingerprint-based CHRC revealed no convictions for the listed disqualifying offenses.

Regulation requires that airports must advise the applicant that a copy of the criminal record received from the FBI may be provided if requested in writing by the applicant, and that the Airport Security Coordinator (ASC) is the applicant’s point of contact for questions. Air carriers must provide the same disclosure to applicants along with a point of contact for questions.

Random audits conducted by airport operators on air carrier certifications showed numerous air carriers were copying and pasting the same case number onto multiple individuals’ certifications. Due to this, some airports no longer accept air carrier certifications, preferring to fingerprint and adjudicate all air carrier employees.
Rap Back Overview

The FBI’s Rap Back program is an automated service that notifies an authorized agency (airport or air carrier) of criminal events that are associated with an enrolled badge holder’s fingerprints and are reported after the initial CHRC is conducted. This allows participating airports and airlines, as authorized agencies, to evaluate continued badge/access privileges without relying on the badge holder to self-report a disqualifying event.

Currently, Rap Back participation is voluntary. As of this publication, TSA has released a proposed National Amendment (NA) to airports and standard security program changes to air carriers to mandate Rap Back participation. TSA received comments from the aviation industry, but has not yet issued the final NA or standard security program changes.

Rap Back and its associated processes are briefly described in this section and referenced throughout the document. TSA’s Rap Back User Guide for Airport and Aircraft Operators, commonly referred to as RBUG, is available via the TSA’s HISN ACO-200 web board and the Next Generation Fingerprint Results Distribution (FPRD) website. It should be reviewed in detail and regularly referenced. The content is updated as needed and provides detailed information and useful instructions for navigating Rap Back. The version referenced in this document is 1.9, issued in April 2020.

In addition, airports and air carriers participating in Rap Back should carefully review all TSA Aviation Worker Bulletins addressing Rap Back to ensure awareness of program or process changes. Airports and air carriers receive these bulletins directly from their DACs, associations, and HSIN.

Implementing Rap Back

It is important to emphasize user education and preparation prior to and during implementation of the Rap Back program. DACs are required by the TSA to provide implementation training for individuals in the credentialing office. Training includes how to subscribe and unsubscribe individuals within the DAC’s system, and the workflow procedures.

An airport may choose to implement an IDMS before participating in the program as a way to enhance their credentialing and vetting workflow. If so, staff will need training to navigate the Rap Back program within the IDMS as well.

When first implementing Rap Back, some airports choose to subscribe all current badge holders at once, while others do so in groups of several hundred to several thousand depending on the badged population. Some others have opted to subscribe new employees upon badge issuance and currently badged employees when they renew their badge. Airports and air carriers should consider which option makes the most sense for the size of their badge population, credentialing office demand, and budgetary constraints. If everyone is enrolled at one time, RBN adjudication could be significant since administrative changes are part of the RBN notifications.

Airports and air carriers should work with their DAC to ensure the subscription process, including potential automation, is understood and to establish a plan for subscribing both current and new badge holders.
For more information on enrolling new badge applicants, refer to Step 2: Submit via DAC in Section 2 of this guidebook. Detailed enrollment instructions are included in TSA’s RBUG.

**Rap Back Notifications**

Triggering events that will result in a Rap Back notification (RBN) include the following:

- Arrests
- Dispositions, including expungement and partial expungement
- Warrant issuance, deletion, and modification
- Sex Offender Registry addition, deletion, and modification
- Death Notices

These triggering events are standardized and cannot be changed by the participating agency.

RBNs resulting from these events contain an Identity History Summary (IdHS)—formerly known as a rap sheet—which is considered personally identifiable information (PII) and must be protected and kept secured. Protocols for maintaining the privacy of individuals should be put in place before enrolling them. Most airports use the same processes and protocols used to manage IdHSs obtained during a CHRC, with the addition of follow-up/tracking the person through the legal process. Workflow planning will also require new procedures to be developed that outline the process for receiving and adjudicating IdHS resulting from RBNs.

Timely RBNs are dependent on available records from law enforcement agencies and courts. If these entities do not update their records consistently and in a timely manner, which is sometimes the case, RBNs may be received weeks or even months after an arrest or update to a case.

**Maintenance Transactions**

A Rap Back maintenance transaction (RBMNT) is used to perform several types of actions for a subscription, such as replacing or modifying biographic data (e.g., name changes, spelling corrections), extending expiration dates, renewing an expired subscription, or cancelling an active subscription.

Airports and air carriers should work with their selected DAC to establish the interface that will support completing these types of transactions.

See Rap Back Maintenance in TSA’s RBUG for additional information.

**Subscription Expiration**

All subscriptions are required to have a validation and an expiration date as part of Rap Back’s privacy risk management strategies. A Rap Back Renewal Notification (RBRN) is sent 10 days before the expiration date, giving the airport or air carrier time to manage the notifications. The TSA recommends that airports and air carriers review each expiration notification, validate that the subscription is still valid, and extend it with a new expiration date. Subscriptions are automatically removed from the system by the FBI upon expiration.

The TSA recommends that airports and air carriers establish a process for extending or cancelling subscriptions prior to the expiration date.
See Rap Back Renewal Notification in TSA’s RBUG for additional information.

**IdHS Sharing**

Participating agencies have the option to share IdHS with other authorized agencies that use Rap Back. For example, an air carrier can grant sharing privileges to an airport operator for an employee seeking a SIDA badge at that airport. Sharing eliminates the need for multiple agencies to subscribe the same person. Access can be granted (and revoked) by the original subscriber through the FPRD.

⚠️ Note that both entities are required to independently adjudicate the RBNs they receive using this feature.

See TSA’s RBUG Appendix F – *Sharing Criminal History Record Information Between Agencies* for additional information.

**TSA Contact Information**

For questions specifically related to Rap Back, submit inquiries to rapback@tsa.dhs.gov.

For questions specifically related to FPRD, submit inquiries to FPRD-Helpdesk@tvs.tsa.dhs.gov.

For questions or support from TSA, submit inquiries to aviation.workers@tsa.dhs.gov.

---

**Section 1 – Summary of Best Practices and Recommendations**

✦ To reduce processing delays, Authorized Signatories should be trained to assist applicants with the application process and review the application for missing information before it is submitted.

✦ Provide ongoing document recognition training for Trusted Agents and Authorized Signatories focusing on the Form I-9 document list to comply with TSA regulations and SD requirements.

✦ Regularly check for updates to the Form I-9 list.

✦ Airports and air carriers should work with their DAC to ensure the Rap Back subscription process, including potential automation, is understood, and to establish a customized plan for subscribing both current and new badge holders.

✦ Airports and air carriers should work with their selected DAC to establish the interface that will support completing Rap Back maintenance transactions.

✦ The TSA recommends that airports and air carriers establish a process for extending or canceling Rap Back subscriptions prior to their expiration date.
SECTION 2: CHRC PROCESS

Steps 1 through 8 describe the baseline adjudication process flow required by 49 CFR §§ 1542.209 and 1544.229, as well as associated Rap Back steps.

Step 1: Capture Prints and Request CHRC

Fingerprints are generally captured and processed electronically. Many airports have migrated to Type 14 (“slap”) prints, replacing the slower individual finger rolling process required in the first generations of electronic technology. The newer technology has reduced the time taken to capture “good” prints, and resulted in fewer “null” prints. There are only a few airports and air carriers that continue to roll prints on fingerprint cards, which must be approved by the FBI and distributed by the TSA for that purpose.

At the time of the applicant’s fingerprinting, the airport Trusted Agent or air carrier staff member must provide a CHRC attestation document that includes the list of the 28 disqualifying criminal offenses. In addition, a statement must be provided to inform the applicant of his or her continuing obligation to disclose to the airport or air carrier, within 24 hours, if convicted (or found not guilty by reason of insanity) of any disqualifying criminal offenses that occur while the individual has unescorted access authority. The applicant must sign and date the attestation document acknowledging their understanding of the regulation.

The airport must also have the applicant read and sign a certification statement when collecting information not already in the airport operator’s records. The language in the certification statement is periodically updated by the TSA, and airports should refer to the latest regulations to ensure they use the current version.

In addition, the airport must present the Privacy Act Notice to each applicant when they provide the information required for an STA. The language is updated periodically by the TSA and airports should refer to the latest regulations to ensure they use the current version.

For airports and air carriers participating in the Rap Back Program, the Privacy Act Notice provided by the TSA is not the appropriate notice to include in the badge application. The program is maintained by the FBI, therefore participating airports and air carriers must use the FBI’s Privacy Act Notice.

The statement advises the applicants on the collection of their fingerprints, that their biographic information will be retained and searched in the FBI database, and that their information may be shared with authorized parties. Several airports have already had their TSA Rap Back procedures audited by the FBI. Many of these airports were asked to update to the correct FBI Privacy Statement.

Some airports have added statements to the application form and/or Applicant Certification, or added a Security Responsibilities Acknowledgement section to the certification, which the applicant must acknowledge and sign.

As long as the language of the Privacy Act Notice statement remains the same, airport and air carriers have the right to include additional statements. However, prior to adding any statements to the application process, airport operators or air carriers should consult with local legal counsel.

Examples of additional statements reported in airport surveys can be found in Appendix D.
Step 2: Submit via DAC

DAC service providers collect and submit employee biographic and biometric data to the TSA. TSA then conducts the STA with the biographic information and submits the biometric information to the FBI, which provides the applicant’s current IdHS. A summary of the history of DACs is in Appendix B.

The DAC offers airports and air carriers a front-end, online method for capturing biographical information and submitting electronic fingerprints. Most airports use this method to transmit the biographic and biometric information to the DAC electronically. However, some airports use Excel spreadsheets to report the data to their DAC, which can result in a high rate of error responses and cause delays in receiving CHRC results. Airports should consider an electronic method to transmit the biographical data to their DAC in order to reduce errors resulting from Excel spreadsheets, and encourage prompt receipt of the results.

Regardless of how the information is transmitted, the information flow remains the same (see Figure 1). It is important for Trusted Agents and air carrier staff to be aware of the information flow and how data errors can disrupt or delay the process.

Figure 1. Flow of Information through DAC
ENROLLMENT IN RAP BACK

Just as CHRCs flow through the DAC, Rap Back enrollment flows through the DAC.

The two basic workflows for enrolling or subscribing an applicant in Rap Back are described below. Detailed information for each can be found in TSA’s RBUG.

**Search and retain followed by subscription:** This workflow allows the user to review the FBI record before subscribing. Airports and air carriers often choose this workflow when enrolling current badge holders so that an arrest occurring between the last CHRC and Rap Back enrollment is not missed.

**Search and subscribe:** This workflow allows the user to set up the subscription before reviewing the FBI record. Many airports and air carriers use this workflow for new applicants or for current badge holders being enrolled during badge renewal. The search and subscribe workflow requires the subscription cost to be paid up front, meaning that the DAC subscription fees are paid regardless of whether the individual is approved or denied a badge.

The subscription expiration date can be set to coincide with the badge expiration date or earlier, but cannot exceed 2 years plus 30 days from the date of subscription inception.

**Step 3: Retrieve Results via FPRD**

The FPRD website is used by airports and air carriers to obtain the results of badge applicants’ CHRCs. In order to use this website, an email requesting a user account should be sent to FPRD-helpdesk@tvs.tsa.dhs.gov.

If an employee is entered in Rap Back, the FPRD will provide an RBN whenever there is a triggering event. Airports and air carriers need to have protocols established for the handling of non-disqualifying arrests. For example, a DUI is not on the list of 28 disqualifying offenses, but if the person has driving privileges, should a DUI arrest trigger any further actions?

Additionally, airports and air carriers should be prepared to receive an RBN indicating an administrative change from the court. Many of the RBNs received by subscribing parties are superfluous and are often administrative updates from the courts or law enforcement agencies (new court templates, updates to personal information, etc.) These types of notifications can be frustrating and time-consuming for adjudicators and could result in a full adjudication if notes are not made during initial and subsequent adjudication.

Keeping notes on case disposition discoveries may help to eliminate repeated investigations during the badge renewal process. This is especially true for airports and air carriers participating in Rap Back, as the RBNs from the program may not indicate what was changed on the IdHS. The FPRD website has a comments section on each individual’s record that could be utilized for this process. All comments should include dates for easy reference.

TSA regulations 49 CFR §§ 1542.209 and 1544.229 cover the dissemination of results from criminal record information provided by the FBI.

No person may disseminate the results of a CHRC to anyone other than:

- The individual to whom the record pertains, or that individual’s authorized representative
- Officials of other airport operators who are determining whether to grant unescorted access to the individual under this Part
- Aircraft operators who are determining whether to grant unescorted access to the individual or authorize the individual to perform screening functions under 49 CFR § 1544
- Others designated by TSA

**Step 4: Evaluate**

After obtaining the applicant’s IdHS from the FPRD site, a quick review by the adjudicator will, in most cases, determine whether the applicant is qualified or potentially disqualified.

If the results show no record, the Trusted Agent may move to Step 8: Final Badging Decision. If, however, the IdHS shows a criminal record, the Trusted Agent should move to Step 5: Determine Record/No Record to determine if the applicant is immediately disqualified or the IdHS needs to be adjudicated.

A third, less frequent possibility is unclassifiable prints. If this occurs, further action is required through the FPRD, with the exact steps depending on whether potentially matching candidates were found. See TSA’s RBUG, Appendix G Unclassifiable (Low Quality) Fingerprints for detailed instructions that apply regardless of an airport’s participation in Rap Back.

Occasionally, the IdHS will be returned incomplete, meaning that the IdHS contains arrests without a final disposition, an expungement, or sealed case information that has been removed from the state and FBI summary. Airports that receive an incomplete summary should request more information from the FBI via the FPRD website. The website recommends that airports compare the requested IdHS to the original, incomplete summary to see what has been changed.

The records of investigations must be maintained in a manner that is acceptable to TSA and in a manner that protects the confidentiality of the individual.

- At a minimum, records should be stored securely and only adjudicating staff should have access to this information. If using an IDMS, appropriate access permissions should be set.

The investigation record for each individual must be maintained until 180 days after the termination of the individual’s unescorted access authority. When files are no longer maintained, the criminal record must be destroyed. Only direct airport operator employees under 49 CFR § 1542.209, or direct air carrier employees under 49 CFR § 1544.229, may carry out the responsibility for maintaining, controlling, and destroying criminal records.

**Step 5: Determine Record/No Record**

If the IdHS retrieved from the FPRD site reveals a criminal history, the adjudicator must review the data to determine if there are any convictions or arrests that resulted in a conviction for any of the 28 disqualifying crimes.

- An experienced individual with prior knowledge in reviewing criminal records will be able to examine the conviction information more easily and efficiently.

- Local legal counsel or law enforcement should be consulted if the adjudicator is uncertain as to the elements of past action, complicated records, or when there is possible expungement of a prohibited conviction.

According to 49 CFR §§ 1542.209 and 1544.229, an applicant is disqualified if he or she was convicted, pled guilty (including no contest), or was found not guilty by reason of insanity for any of the...
disqualifying crimes in any jurisdiction during the 10 years before the date of the individual’s application for unescorted access authority, or while the individual has unescorted access authority. For the TSA’s definition of a conviction, see Appendix C.

If the applicant was convicted of any one of the disqualifying felonies, he or she is immediately disqualified from obtaining an airport ID badge and the adjudicator may move to Step 7: Corrective Action and Appeals Process.

For some airports, this is where the process ends. If the applicant has a disqualifying crime, they are immediately denied an airport ID badge. Other applicants who do not have a disqualifying crime are approved to obtain a badge and the process moves to Step 8: Final Badging Decision.

If the IdHS shows a criminal record that does not result in immediate disqualification or the airport has made the decision to implement suitability determinations, then the process moves to Step 6: Adjudicate.

**WANTS AND WARRANTS**

An IdHS may include an active want or warrant. Many airports elect to focus their efforts solely on the credentialing process and consider wants and warrants to fall under law enforcement jurisdiction. An airport in this circumstance may choose to simply notify the warrant issuer that the individual has applied for a position, but not release any other information (PII such as address or contact number should be kept confidential). Each airport should have a policy indicating their procedure for an active want or warrant.

Some airports run an annual Wants and Warrants check for all airport ID badge holders. However, with Rap Back participation, annual Wants and Warrants checks would be unnecessary as the program would send an RBN for that triggering event.

If an airport elects to run an annual Wants and Warrants check, or if they are currently utilizing Rap Back for all current badge holders, they need to develop a policy regarding the action they will take if an existing badge holder is identified during this check. Local legal advice should be sought prior to performing the annual Wants and Warrants check or developing policy.

**Step 6: Adjudicate**

The adjudication process begins with obtaining an IdHS from the FPRD site. Adjudication requires a determination of whether an identified offense constitutes any of the 28 disqualifying crimes specified in 49 CFR §§ 1542.209 or 1544.229. That adjudication involves a three-factor analysis, which includes:

1. **Assessing the existence of a disqualifying crime** – The initial review of the IdHS should look at each arrest. The charge describes the reason for the arrest. Depending on the jurisdiction, it may list the criminal code that was violated or if it was a felony or misdemeanor. Generally, this is enough information to determine whether the arrest falls under one of the 28 disqualifying offenses. If it is unclear whether the arrest may be a disqualifying offense, move forward to determine if there is a conviction.

2. **Assessing the existence of a conviction** – If the charges have been dismissed, then the offense is not disqualifying. It is common for the conviction to be of a lesser charge that may not be disqualifying.

3. **Assessing the conviction within the specified look-back period** – If the date of the conviction is more than 10 years old (or whatever look back the airport has defined), the offense is not disqualifying.
Once airports receive potentially disqualifying results from the CHRC, they may adjudicate them differently due to their state and local rules and regulations. Adjudication resources are noted in Appendix E.

Without experience, adjudicating CHRCs can seem overwhelming and confusing. In addition to knowledge of IdHS terminology and varying penal codes, adjudicators must have an understanding of regulatory requirements to ensure that they are applying the regulations correctly. Otherwise, they may in good faith change a process, and by doing so later discover they are not in regulatory compliance. Training information can be found in Appendix F.

Many adjudicators have no formal training on the CHRC process, only on-the-job training and the assistance of local law enforcement officers (LEO). Some airports use active or former police personnel with formal training to interpret and adjudicate IdHS and penal codes since they are generally more knowledgeable on the topic than civilian staff.

A major domestic air carrier stated that they contract out for CHRC processing with the National Air Transportation Association (NATA) – Compliance Services. The CHRC results are then provided to an internal analyst for the final badging suitability decision. They also indicated that TSA personnel are involved in adjudication for individuals who are involved in or potentially involved in charter operations.

Some airports responded that they use a local TSA resource to assist in the adjudicating process. While it is not the TSA’s responsibility to vet records, the agency may be consulted for a legal opinion or direction on complex records. An example where TSA may be willing to assist is when a record is returned and the individual supplies legal paperwork that shows their record should have been sealed or expunged. TSA’s legal opinion would serve as the final say on these matters.

Some airports have chosen to include additional disqualifying crimes and suitability determinations in their policies. For more information on these, refer to Section 3.

**LACK OF DISPOSITION**

Local, state, and federal courts may fail to promptly report final dispositions, so CHRCs often show an arrest but no corresponding conviction. When this occurs, federal regulations require that adjudication staff conduct an investigation to determine that the arrest did not result in a disqualifying offense before issuing that applicant an airport ID badge. Additionally, there may be arrest and conviction information but no indication of sentencing.

Some airports notify the applicant that there is a potentially disqualifying offense and request that they provide official certified court documentation confirming that they were not convicted, since initial charges may have been dismissed, reduced, or pled down.
The best practice for determining the adjudication for these records is to have the applicant provide court-certified copies of the disposition. If the documents are sent electronically, they should come directly from the court to ensure legitimacy of the documents, not from the applicant or the applicant’s attorney.

Additionally, the applicant may be required to interview with the airport adjudicator when the documents are presented to the airport. Adjudication interviews can be emotional for applicants, so having two staff members in the interview helps to maintain an orderly and safe environment. This best practice also provides a level of protection from accusations of impropriety.

Some airports have staff research and adjudicate the record. However, investigating court records on behalf of an applicant can consume incredible amounts of time and not all airports have the resources to devote to this level of effort. Locating the proper contact for a given jurisdiction; obtaining the proper, certified documents; paying, if required, the costs associated with retrieval; and demonstrating that you have authority to obtain the documents can be tedious. Typically, applicants have much easier access to these records.

When adjudicating applicants with an arrest or outstanding warrant that has no disposition, airports may choose to wait until the applicant can present evidence that a disposition has been reached before making a final determination on badge issuance.

**DISCLOSURE TO APPLICANT**

Before making a final badging decision, the adjudication staff must advise the applicant if the CHRC results disclose information that would disqualify him or her from being issued an airport ID badge (refer to Step 7: Corrective Action and Appeals Process).

**TSA’S LEGAL GUIDANCE ON CRIMINAL HISTORY RECORDS CHECKS (2004)**

In a memorandum entitled “Legal Guidance on Criminal History Records Checks” (attached as Appendix C and referred to hereinafter as the TSA Memorandum), the TSA offers guidance on issues that may present themselves during the adjudication process. While this guidance is not conclusive, most courts will strongly consider an agency’s interpretation of its own regulations.

The TSA Memorandum suggests that the meaning of disqualifying crimes is the meaning given under federal law. The document offers case law to support that position. It also notes that entries on the IdHS may be incomplete and require review of judgment and sentencing documents so that the actual offense that serves as the basis for conviction can be identified.

Many charges can be plea-bargained, reduced, deferred, dismissed, or enhanced based upon a variety of factors. This compounds the confusion on whether a criminal charge can be considered as a conviction.

The TSA Memorandum asserts that certain misdemeanor offenses, mostly related to the illegal use or possession of a weapon, can be considered disqualifying. It also states that juvenile records are generally not considered for the purposes of the CHRC statute, except when the juvenile is tried and convicted as an adult. In such circumstances, the criminal record should be considered when determining whether the individual has a disqualifying offense.

TSA also discusses the airport/air carrier’s authority to apply suitability criteria when adjudicating CHRCs. These suitability determinations may be used by the airport/air carrier, but should be vetted with the airport/air carrier’s legal counsel to ensure compliance with state and local laws, as well as federal regulations.
FEDERAL AND STATE EQUIVILANCE

The disqualifying crimes specified and defined by federal law are often not the crimes that badge applicants are charged with or convicted of. Frequently, the crimes are governed by similar but not identical state law provisions. The first factor of adjudication is an inquiry to determine equivalence. The TSA Memorandum provides little insight on rules to govern this process.

One airport has paid a private law firm approximately $30,000 to develop an analytic matrix ("cheat sheet") comparing their state’s offenses to the 1542.209(b) offenses. While this option may be cost prohibitive for many airports, creating a cheat sheet of commonly encountered disqualifying penal codes is more economical and has the added benefit of becoming a training tool for new adjudicators.

Appendix E contains a listing of useful resources for checking state penal codes.

A properly trained person, such as an attorney or LEO, should be consulted when there is a question as to the wording of a conviction as it relates to matching disqualifying crimes. That person will often need to review additional court records to determine if the applicant has been found guilty based on the underlying elements of a disqualifying crime.

Many airports use two people to adjudicate each record. This provides a layer of quality control and consistency in the adjudication process. Adjudicating can be complex, and having a second person review the adjudication decision has been found to be helpful. Ideally, at least one of those reviewers should be a sworn LEO.

In the absence of guidance or information on TSA practices, local legal counsel should look to legal precedence for similar adjudication practice under other federal statutes that may offer guidance for airports. A significant body of case law has grown around the adjudication of federal statutory provisions allowing for mandatory sentencing (like mandatory sentences for individuals who are habitual offenders and have been found to have been convicted of other predicate crimes). Just as is the case with the 28 disqualifying crimes, the statutes are defined under federal law, but the crimes of conviction may be state law offenses.

EQUIVALENCE BETWEEN STATES

Many adjudicators have been in the position for enough time that they are able to interpret common penal codes from neighboring states with confidence, particularly those airports located near state borders. In the absence of that experience, a state’s website that describes each penal code is a useful resource in investigating equivalence between states. However, there is always a possibility that the penal codes have changed since the final disposition of the case at hand.

Links to each state’s penal code website are located in Appendix E.

LOOK-BACK PERIOD

The current disqualifying look-back period is 10 years. According to the rule, and validated by the TSA Memorandum, the period runs backward from the date of the CHRC to the date of conviction only (not incarceration, probation, or parole).

The TSA Memorandum notes that other transportation disciplines apply other rules with respect to the look-back period for disqualifying crimes. For persons seeking Transportation Worker Identification Credentials (TWIC) with Hazardous Material Endorsements (HME), some offenses are permanently disqualifying and some offenses require an additional look-back period of five years after release from
incarceration for those crimes. Incarceration release date is not considered in the current look-back period for applicants seeking unescorted access under 49 CFR § 1542 or 1544.

However, some airports are not limiting their adjudication of records to a 10-year look back. Some redefine their 10-year look-back period so that it begins post-probation or post-parole. One airport sets a steadfast look-back date of December 6, 1991, which is the look-back period in the previous Federal Aviation Regulation (FAR) Part 107.31, which was enacted in 1998.

**MILITARY DISPOSITION CODES**

Several airports indicated that they find military charges difficult to understand. The following information may clarify the different forms of court-martial to help airports and air carriers better align these charges with the civilian penal codes.

According to [www.military.com](http://www.military.com), the Uniform Code of Military Justice (UCMJ) provides for three different types of court-martial: summary, special, and general. These forms of court-martial differ in their makeup and the punishments that may be imposed.

1. **Summary court-martial** consists of one commissioned officer and may try only enlisted personnel for noncapital offenses. The punishment that may be imposed depends on the grade of the accused. In the case of enlisted members above the fourth pay grade, a summary court-martial may impose any punishment not forbidden by the law except death, dismissal, dishonorable or bad conduct discharge, confinement for more than one month, hard labor without confinement for more than 45 days, restriction to specified limits for more than two months, or forfeiture of more than two-thirds of one month’s pay. In the case of all other enlisted members, the court-martial may also impose confinement for not more than one month and may reduce the accused to the lowest pay grade, E-1.

2. **Special court-martial** consists of not less than three members and a military judge, or an accused may be tried by military judge alone upon request of the accused. A special court-martial is often characterized as a misdemeanor court, and may try all persons subject to the UCMJ, including officers and midshipmen. A special court-martial may impose any punishment authorized under Rules for Court Martial (R.C.M.)1003 except death, dishonorable discharge, dismissal, confinement for more than one year, hard labor without confinement for more than three months, forfeiture of pay exceeding two-thirds pay per month, or any forfeiture of pay for more than 1 year.

3. **General court-martial** consists of not less than five members and a military judge, or an accused may be tried by military judge alone upon request of the accused. A general court-martial is often characterized as a felony court, and may try all persons subject to the UCMJ, including officers and midshipmen. A general court-martial may adjudge any punishment not prohibited by the UCMJ, including death when specifically authorized.

In 49 CFR §§ 1570 and 1572, the TSA determined that military personnel with a dishonorable discharge were not automatically disqualified because of the discharge. For individuals applying for a hazardous materials commercial driver’s license the TSA recommends that the underlying crime(s) or offense(s) that led to the discharge should be reviewed closely to determine the individual’s suitability. The recommendation to carefully review the underlying charge is also appropriate for the aviation environment.
JUVENILE CASES

Juvenile cases are unique in that they are typically sealed and excluded from the public record when the individual turns 18. However, it is fairly common for the sealing of the records to be missed without the individual or the individual’s representative notifying the courts. In these instances, an open case without disposition may show up on the IdHS. Most adjudicators will then treat the offense in the same way as any other offense—if it is non-disqualifying, the offense is not a problem; if it is disqualifying, a badge denial is sent, which may result in an appeal.

In the TSA Memorandum, TSA asserts that juvenile records are generally not considered for the purposes of the CHRC statute, except when the juvenile is tried and convicted as an adult. In such circumstances, the criminal record should be considered when determining if the individual has a disqualifying offense. It is possible for the individual to work with the court during the appeals process to have the record sealed or expunged, in which case the offense would no longer be considered part of the IdHS.

INTERNATIONAL

Nearly all airports surveyed stated that they do not take extra steps to collect international criminal history. Many indicated that, because non-US citizens require a right-to-work authorization (e.g., Permanent Resident Card) and a criminal background check through the FBI, these serve as suitable proof of no serious criminal history.

RAP BACK NOTIFICATIONS

When reviewing an RBN, adjudicators generally treat the notification in the same manner as all other CHRC notifications. The adjudicator will first determine whether the notification indicates a disqualifying offense or circumstance. If the notification does not indicate a potential disqualifier, the notification will be marked as reviewed and nothing else will take place. Many adjudicators take the stance that the individual is innocent until final conviction.

The most significant difference an airport or air carrier has to consider prior to participating in Rap Back is protocols for an RBN that indicates an active badge holder’s arrest for a potentially disqualifying crime. Most adjudicators indicated that if the case is a potentially disqualifying offense or circumstance but has no disposition yet, the badge holder will be notified directly or sent a letter asking them to come to the credentialing office, and will then be informed of the notification (refer to Step 7: CHRC and Rap Back Appeals Process).

From there, the adjudicator will monitor the situation closely and will often update the badge expiration to coincide with the next court date, or require the badge holder to check in regularly until a disposition has been made. By restricting the length of time the badge is valid, the airport will be able to control the situation and not have someone badged that may have been convicted of a disqualifying crime, thus reducing the potential security risk. If the final disposition shows that the offense or circumstance is disqualifying, the badge is revoked.

Adjudicators who have dealt with a potentially disqualifying RBN indicated that the final disposition can take weeks or months from the first notice of arrest. In this circumstance, the badge expiration is updated in conjunction with the court dates.

Airports and air carriers planning to participate in Rap Back should review their adjudication process and procedures to ensure adjudication of RBNs is part of those processes and procedures.
Each notification received should be adjudicated and marked as reviewed by clicking “Complete Review” on the IdHS Details page within the FRPD. The TSA recommends completing the review within 72 hours of receiving the notification.

**Step 7: Corrective Action and Appeals Processes**

Badge applicants who are found to have a potentially disqualifying offense in their record have the right to correct information they believe is erroneous or based on incorrect information in the FBI IdHS or federal status databases. This corrective action process is outlined in 49 CFR § 1542.209 (h).

Before denying the applicant’s badge, the airport must inform the applicant of the potentially disqualifying information, and provide a copy of the record upon request. The applicant then has 30 days to notify the adjudication staff in writing of their intent to correct any information they believe to be inaccurate. It is the applicant’s responsibility to contact the local jurisdiction and/or the FBI to obtain the complete or correct information.

The adjudication staff must only accept a revised FBI record or a certified true copy of the corrected information from the appropriate court, and should ensure that corrected records have a certified court seal.

Once the corrective action process has been completed, the applicant is sent a letter advising them of the final decision. The employer is also notified that the applicant has been approved for or denied an airport ID badge. Due to TSA regulations, the airport may not provide any other details to the employer.

Regulations will only allow for correction of incorrect information or for providing information on how the offense was not disqualifying. Once it has been determined that the conviction was of a disqualifying offense, there is no further recourse for the applicant, unless the airport has an additional appeals process.

Airports are not federally mandated to provide an appeals process in addition to the corrective action process described above. If they choose to, it is up to each airport to define, develop, and publish the protocols for that process.

Airports with an appeals process typically use senior staff to review the adjudication decision. These airports indicated that the ASC, Chief of Police, or Aviation Security Director conducted the appeal and made the final decision. Occasionally, airports will use a governing body or their legal counsel to conduct the appeals process.

The flow chart presented in Figure 2 shows the baseline corrective action process that adjudication Trusted Agents are required to perform, as well as the appeals process (in orange) that some airports provide in addition to the baseline process.

“Listen to the applicant carefully and make it clear that you personally are not judging them, but regulatory requirements prohibit you from approving them.”

~Survey respondent
RAP BACK NOTIFICATION APPEALS PROCESS

An RBN for an existing badge holder indicating a disqualifying crime will follow essentially the same appeals process. Applicants should be given the opportunity to supply official court documentation indicating the updated status of the arrest. Should the arrest result in a disqualifying conviction, the badge will be revoked.

Some airports indicated that with the implementation of Rap Back, they have added a clause to the application indicating that failure to notify the badging office of a potentially disqualifying criminal arrest within a set time frame (varying from 24 to 72 hours), will result in the badge being suspended until the final disposition can be determined. Some of these airports require notification of any criminal arrest, regardless of whether the crime is potentially disqualifying or not.

Step 8: Final Badging Decision

Based on the applicant’s CHRC results and/or the corrected information—or lack thereof—submitted during the review process, the adjudication staff must notify the applicant that a final decision has been made to grant or deny an airport ID badge.

At some airports, if the applicant is potentially going to be disqualified after review of official court documentation, the adjudicator will send the documentation to another party for a second opinion. The second opinion might come from the legal department, a law enforcement agency, or the airport’s senior staff.

- Conducting periodic audits of the adjudication staff’s work by a senior official, such as the ASC, confirms that the regulations are being applied correctly and consistently.
- Creating an internal do-not-issue/do-not-escort list that is checked prior to issuing visitor credentials could prevent an individual denied an airport ID badge from receiving a visitor badge. However, the list should also include an expiration date for when the individual may qualify for a badge.
Section 2 – Summary of Best Practices and Recommendations

✦ Adopt electronic methods to transmit data to the DAC to reduce errors and delays
✦ Keep disposition case notes to eliminate repeated work during the badge renewal process
✦ Store records securely and with proper permissions to allow access by adjudicating staff only
✦ Have an experienced individual with prior knowledge in reviewing criminal records examine conviction information
✦ Consult legal counsel or law enforcement for assistance with complicated records
✦ Run an annual Wants and Warrants check for all airport ID badge holders not subscribed to Rap Back
✦ Require that applicants provide certified court copies of dispositions and corrected records
✦ Have two staff members present for adjudication interviews to maintain a safe environment
✦ Create a “cheat sheet” of common disqualifying penal codes for your airport
✦ Use two people to adjudicate each record, including at least one sworn LEO
✦ Adjudicate each RBN and mark as reviewed within 72 hours of receiving the notification
✦ Conduct periodic audits of the adjudication staff’s work
✦ Create an internal do-not-issue/do-not-escort list with expiration dates that is checked prior to issuing visitor credentials
✦ Figure 3 summarizes the baseline CHRC steps identified in this section and identified in 49 CFR §§ 1542.209 and 1544.229, as well as their integration with the Rap Back process.

SECTION 3: SUITABILITY & EXCEEDING REQUIREMENTS

Federal regulations provide a baseline of requirements; TSA does not prohibit airports from implementing additional measures in evaluating applicants for airport ID badges. However, accessing and utilizing criminal history or other information in making credentialing decisions may have legal implications involving discrimination or invasion of privacy rights.

Legal Implications

By adding criteria to the airport’s published rules and regulations, the airport provides transparency to potential badge applicants, and provides additional information that can be used by the airport when deciding to deny badge requests or revoke badges at their airport.

However, using anything beyond the TSA required criminal history to determine suitability to possess an airport ID badge needs to be well thought out and clearly documented. Many of the processes to vet employees are better suited to making hiring decisions and not determining unescorted access at airports.

Airports that are considering whether they want to add suitability disqualifiers to their adjudication process should consult with legal counsel. Defensibility of policy must be considered. Questions to determine defensibility include:

- For each offense or factor considered, what is the correlated risk to airport security and how is that risk predicted?
- What is the potential impact on protected classes, certain types of work, or a given badge population?
- Is the impact justified by the reduced risk to security?
- Are legal representatives willing to defend this policy in arbitration or court?

Airports should work closely with their legal departments when determining what information will be considered in making credentialing decisions.

To ensure consistent understanding and application, it is important to ensure all measures used in evaluating airport ID badge applicants are clearly stated in airport rules, regulations, and policies.

Applying measures that are not clearly documented in the rules, regulations, and policies could have legal implications.

BAN THE BOX

Nationwide, over 100 cities and counties have adopted what are widely known as Ban the Box statutes, calling for employers to consider a job candidate’s qualifications first, without the stigma of a criminal record. The intent is to provide applicants a fair chance by removing the conviction history question on the job application and delaying the background check inquiry until later in the hiring process.

The introduction of additional crimes as a bar to unescorted access to airports—and therefore potential employment at those airports—may result in the introduction of statutes or ordinances to preclude such activity in those jurisdictions where Ban the Box has found traction. They might also result in requirements for additional review or waiver processes with respect to including additional crimes.
As of 2020, Ban the Box statutes would likely not apply to decisions regarding credentialing, but they indicate a sensitive legal environment when considering criminal convictions that automatically preclude employment.

**STATE AND LOCAL CONSIDERATIONS**

When adding to the airport’s list of disqualifying crimes, there is also a need to consider state or local equal employment opportunity provisions. For example, in some locations, consideration of arrest data is prohibited by state law or local ordinance. Similarly, some states and localities have adopted statutes targeted at reducing the importance or consideration of convictions in employment-related decisions. Some states and localities have promoted polices to affirmatively employ ex-offenders as part of offender reintegration programs.

Additionally, local or tribal laws regarding disqualifying crimes that are considered during the adjudication process should be included in the airport rules, regulations, and policies to ensure consistent hiring practices. Information regarding tribal constitutions and other tribal legal matters can be found here: [www.tribal-institute.org/lists/tribal_law.htm](http://www.tribal-institute.org/lists/tribal_law.htm)

**Additional Disqualifiers and Suitability Factors**

Approximately half of the more than 200 airports interviewed for this research exceed the federal regulations by adding to the list of 28 disqualifying crimes. Airports that have added supplemental disqualifiers indicated that it is often prompted by incident at the airport or as a result of working closely with the airport authority and legal department.

> “We are more interested in adjudicating for patterns, including misdemeanor patterns, since many are reduced felonies.”

~Survey Respondent

Several airports have added a suitability clause to the list of federal disqualifiers that allows the airport police chief or ASC to determine if an applicant is unsuitable to protect the airport’s security based on patterns of conduct or other circumstances. In extreme cases, this responsibility falls to the airport authority. Two important suitability considerations are:

1. Is there a criminal offense that results in a conviction?
2. Is there habitual conduct that has an outcome that has not been decided through due process?

Examples of suitability criteria include:

- Demonstrating inappropriate conduct in the badging process
- A conviction of theft, larceny, or violence on airport property
- Patterns of crime or petty crime on airport property
- Any crime committed at the airport that leads to an arrest
- Repeated violations of airport security policy
- Transporting a weapon through the security checkpoint or into the Secured Area
- Crimes involving minors
- A propensity to commit criminal acts (as evidenced by a history of multiple non-disqualifying offenses)
Many airports without the legal authority to alter the list of disqualifiers have opted to add a clause to the badge application that requires the applicant to list all crimes committed in the last 10 years. Lying, omitting, or misrepresenting criminal offenses on the application would result in the applicant being denied a badge.

An analysis of interview responses was conducted to identify common disqualifying factors that airports apply beyond the federal regulations. Table 1 shows a comparison matrix of these additional disqualifying offenses and potential suitability determinations that airports are currently using or would like to use beyond the regulatory requirements.

Research into other industries revealed a variety of suitability factors used in conjunction with CHRCs to vet potential employees, with vetting levels determined by the applicant’s anticipated job role and responsibilities. Details of this research can be found in Appendix G.
Section 3 – Summary of Best Practices and Recommendations

- Ensure all measures used in evaluating airport ID badge applicants are clearly stated in airport rules, regulations, and policies
SECTION 4: SUMMARY OF BEST PRACTICES & RECOMMENDATIONS

The following recommendations and best practices are based on survey responses and interviews, as well as the author’s research and experience with airport credentialing and adjudication. They may be applicable to all airport sizes and categories, but should be viewed through the lens of the airport’s unique operating environment. Airports should seek legal counsel prior to implementing any measures that exceed federal requirements.

Provide ongoing document recognition training for Trusted Agents and Authorized Signatories
Improving Trusted Agents’ and Authorized Signatories’ knowledge of authentic and acceptable documents improves efficiency in the vetting process and improves communication between the credentialing office and Authorized Signatory community.

Check for updates to the Form I-9 list regularly
The Form I-9 list is updated periodically, so it is a best practice that airport and air carrier staff members check the list at least every six months to ensure the current version is being used.

Adopt electronic methods (such as an IDMS) to transmit biographical data to the DAC
Accurate results of the CHRC are returned more quickly when there are no errors in the data transmitted via the DAC. Using an automated system to collect and transmit STA biographical information reduces errors. Many airports have upgraded to use Type 14 (slap) prints and found that the newer technology has reduced the time taken to capture prints, and produces fewer null prints. Creating a fillable PDF application form often reduces data input errors by Trusted Agents interpreting handwritten application entries and responses.

Store records securely and only allow adjudicating staff access to this information
The applicant’s court documentation and record should be stored in a secure location and be accessible only to adjudicating staff. If using an IDMS, documents should be marked as secure and appropriate access permissions set.

Have an experienced individual with training and knowledge in reviewing criminal records examine conviction information
Persons with law enforcement experience are generally considered to be more knowledgeable regarding penal codes than civilian staff, and many airports prefer to use their local law enforcement to adjudicate an IdHS when available.

Consult legal counsel or law enforcement to review the elements of past action, complicated records, or when there is possible expungement of a prohibited conviction
Persons in law enforcement or with legal counsel experience are generally considered to be more knowledgeable regarding penal codes than civilian staff and make good resources for more complicated records.

Run an annual Wants and Warrants check for all airport ID badge holders not subscribed to Rap Back
Airports using this best practice need to develop a policy regarding the action they will take if an existing badge holder is identified during the Wants and Warrants check. Legal advice should be sought prior to using this practice or developing related policy. Note that airports using Rap Back will automatically receive notifications of an active want or warrant and will not need to perform this check.
Require the applicant to provide certified court copies of dispositions
Placing the burden on the applicant removes the burden from the airport credentialing office. If the documents are sent electronically, they should come directly from the court to ensure legitimacy of the documents, not from the applicant or the applicant’s attorney.

Ensure corrected records have a certified court seal
This best practice provides assurance that the corrected records are legitimate and not manufactured or altered by the applicant.

Have two staff members present during interviews
Adjudication interviews can be emotional for applicants and having two staff members in the interview helps to maintain an orderly environment. This best practice also provides a level of protection from accusations of impropriety.

Use two people – preferably including a sworn LEO – to adjudicate each record
This best practice provides a layer of quality control in the adjudication process. The subject can be complex, and having a second person review the adjudication decision has been found to be helpful, especially if at least one of the adjudicators is a sworn LEO.

Create an internal do-not-issue/do-not-escort list that is checked prior to issuing visitor credentials
If an applicant is denied an airport ID badge through the required vetting process, some airports add them to an internal do-not-issue list that is checked prior to issuing visitor credentials. Visitor credentials should not be issued to failed applicants, and TSA regulations do not allow them to be escorted.

Conduct periodic audits of the adjudication staff’s work
Having the ASC or senior airport staff audit the work of the adjudication staff verifies that regulations and policies are being applied correctly and consistently.

Provide documentation training annually to the Authorized Signatory community
Becoming familiar with the wide variety of documents covered by the Form I-9 list takes time, and airports have found it beneficial to conduct annual training. Many of the documents are updated with enhanced security measures, so Authorized Signatories need to stay updated on the newer versions of the accepted IDs and the security features they may include.

Check with your airport’s legal counsel or media departments to see if the airport already subscribes to LexisNexis or Westlaw to save on subscription costs
Using these services, a researcher can access the relevant sections of a jurisdiction’s criminal code in effect at the time a crime was committed—that is, the operative time for purpose of determining the elements of a crime upon which a conviction is based. See Appendix E for more information.

Ensure all measures used in evaluating applicants with respect to decisions about granting airport ID badges are clearly stated in airport rules, regulations, and policies
Some airports have added felony convictions of any type to the 28 mandated disqualifying crimes, and have also added arrest reporting requirements. Clearly stating all measures used in evaluating an applicant’s background will help prevent possible legal action later.

Train Authorized Signatories to assist applicants with the application process, and to establish a routine review of the application before it is submitted to ensure all required information is included
Clearly indicating to Authorized Signatories that steps should be taken to both assist applicants in the process and to review applications prior to submission will help reduce occurrences of missing
information. If the airport is using an IDMS, the badging application information may be entered by the Authorized Signatory via an online portal, which will not allow submission of an incomplete application.

**Keep notes on case disposition discoveries on RBN notifications to eliminate repeated investigations**

Keeping notes on case disposition discoveries may help to eliminate repeated investigations during the badge renewal process. This is especially true for airports and air carriers participating in Rap Back, as the RBNs from the program may not indicate what was changed on the IdHS. The FPRD website has a comments section on each individual’s record that could be utilized for this process. All comments should include dates for easy reference.

**Create a “cheat sheet” of common disqualifying penal codes**

A cheat sheet of disqualifying penal codes commonly encountered at your airport provides a quick reference for adjudicators, and has the added benefit of being a training tool for new adjudicators.

**Adjudicate each RBN received and mark as reviewed**

Each notification received should be adjudicated and marked as reviewed by clicking “Complete Review” on the IdHS Details page within the FRPD. The TSA recommends completing the review within 72 hours of receiving the notification.

**Establish a process for extending or cancelling each Rap Back subscription prior to its expiration date**

Mandatory expiration dates are established during subscription to ensure validation takes place regularly, but the TSA recommends that airports and air carriers review each expiration notification, validate that the subscription is still valid, and extend it with a new expiration date.

**Work with the DAC to establish the interface which will support completion of Rap Back transactions**

Some airports choose to upgrade to an IDMS before participating in Rap Back as a way to improve the workflow. Training on Rap Back—and the IDMS, if appropriate—should include how to perform Rap Back transactions within the DAC’s system and workflow procedures. This training is often provided directly by the DAC.

**Arrange for Trusted Agents to visit other airport credentialing offices or law enforcement entities that perform similar adjudication tasks**

Arranging for Trusted Agents to visit other airport credentialing offices or law enforcement entities that perform similar adjudication tasks can prove invaluable in enhancing training, developing a local support network, and sharing best practices.

APPENDIX A: GLOSSARY

Adjudication

According to the TSA Personnel Security Manual, adjudication is “…an examination of a sufficient period of a person’s life to make an affirmative determination that the person is an acceptable security risk.” The adjudication process is used to determine a person’s risk to security and public trust. While there are 28 crimes that are considered immediate disqualifiers if indicated on an applicant’s IdHS, the TSA recommends airports and air carriers also use suitability determinations to understand an applicant’s risk to the aviation community.

Appeals

An appeals process is a formal means for applicants to challenge adjudication decisions. Not all airports offer an appeals process. It is up to each airport to define their appeals process, since there are no federal requirements for airports to provide an appeals process.

Identity History Summary (IdHS)

A record that includes individual identifiers and describes an individual’s arrests and subsequent dispositions. Criminal history records do not include intelligence or investigative data, or sociological data such as drug use history. Formally referred to as a rap sheet.

Designated Aviation Channeler (DAC)

The National Crime Prevention and Privacy Compact created a rule to authorize outsourcing of the process of providing CHRI to private third parties known as Channelers. The Channeler facilitates the submission and management of biographic information for the STA to the TSA and biometric (fingerprints) information for CHRCs to the FBI. TSA requires airports and air carriers seeking CHRCs for applicants to use one of the Channelers that holds an agreement with the agency.

Identity Management Systems (IDMS)

IDMS is an integration of systems, processes, procedures, applications, database management systems, and interfaces that work together to perform various credentialing functions. IDMS solutions and options vary widely between providers, but usually support:

- Management and secure storage of biographic and biometric and information
- Management of information related to the issuance and maintenance of Airport ID Badges, including audits
- Management of background check investigation documents
- Limiting the issuance or continued use of an Airport ID Badge if work authorization is not current
- Limiting the issuance or continued use of an Airport ID Badge if the required security checks are not completed
- Limiting the issuance or continued use of an Airport ID Badge if the required training is not completed

Rap Back Program

The Rap Back program is an automated system used by many industries that allows for continuous update and reporting of CHRC results. The Rap Back service allows authorized agencies to receive notification of activity on individuals who hold positions of trust (e.g., school teachers and daycare workers), or who are under criminal justice supervision or investigation, thus eliminating the need for repeated background checks on a person from the same applicant agency. Prior to the deployment of Rap Back, the national criminal history background check system provided a one-time snapshot view of an individual’s criminal history status. With Rap Back, authorized agencies can receive ongoing status notifications of any criminal history reported to the FBI after the initial processing and retention of criminal or civil transactions. By using fingerprint identification to recognize persons arrested and prosecuted for crimes, Rap Back provides a nationwide notice to both criminal justice and noncriminal justice authorities regarding subsequent actions.

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Reviewing</strong></td>
<td>In the context of this guidebook, reviewing refers to the process of examining the applicant’s CHRC results prior to final adjudication.</td>
</tr>
<tr>
<td><strong>Sedition</strong></td>
<td>Sedition is the crime of saying, writing, or doing something that encourages people to disobey their government. The Sedition Act of 1798 defines sedition as the act or conspiracy of opposition to any measure(s) of the US government; the impediment of the operation of any law of the US government; or the intimidation or prevention of any person holding an office in the US government from undertaking, performing, or executing his or her trust or duty. This includes the intent to counsel, advise, or attempt to procure any insurrection, riot, or unlawful assembly.</td>
</tr>
<tr>
<td><strong>Social Media</strong></td>
<td>Social media encompasses applications that allow for the creation and exchange of user-generated content and allows for communication between individuals, businesses, organizations, and communities. As of the publication of this guidebook, the most common platforms used include Twitter, Facebook, LinkedIn, YouTube, and Instagram, although the popularity of each platform changes with the invention of new social media applications.</td>
</tr>
<tr>
<td><strong>Suitability</strong></td>
<td>According to the OPM, suitability is the “…identifiable character traits and conduct sufficient to decide whether an applicant is likely or not likely to be able to carry out the duties of a Federal job with appropriate integrity, efficiency, and effectiveness.” Suitability adjudication is an evaluation of the fitness—the character and trustworthiness—of the applicant for the position; the process considers an applicant’s personal conduct throughout their careers. The assessment is intended to establish a reasonable expectation that the applicant will protect the integrity or promote the efficiency of the agency.</td>
</tr>
</tbody>
</table>
Prior to 2002, airports experienced difficulties sending and receiving biometric information and the resulting IdHS. This was due in part to the Office of Personnel Management (OPM-aviation channeler) and FBI being overwhelmed with the background check requests for new airport worker applications. In 2002, the first DAC was created through a non-compete agreement with FAA, the aviation security regulator at the time. In 2011, TSA opened up the DAC process to public bid opportunity and additional organizations became TSA-certified DACs. A timeline of the relevant laws concerning the DAC is presented in Figure B-1.

Figure B-1. History of DAC Timeline
LEGAL GUIDANCE ON CRIMINAL HISTORY RECORDS CHECKS

INTRODUCTION

This Legal Guidance document, prepared by the Office of Chief Counsel, provides information for decision makers involved in adjudicating background checks on individuals with unescorted access authority at our nation’s airports. The purpose of this document is to ensure uniformity in the adjudication of background checks for airport and air carrier workers. This Legal Guidance does not create any right or benefit, substantive or procedural, legally enforceable by any party other than the Transportation Security Administration.

BACKGROUND

Section 44936 of Title 49, U.S. Code, requires the Under Secretary of Transportation for Security to issue regulations requiring employment investigations, including a criminal history records check (CHRC), for screeners of the Transportation Security Administration (TSA), flight crew members, or individuals seeking unescorted access to Secure Identification Display Areas (SIDA) of an airport. On February 22, 2002, TSA issued regulations to implement this portion of the statute concerning individuals with unescorted access to Secure Areas of an airport, and screening personnel. See 49 C.F.R. §§ 1542.209, 1544.229, and 1544.230.

The statute and regulations prohibit employment of screeners and those individuals who have unescorted access to aircraft or a secured area of an airport when an individual has a criminal conviction (or finding of not guilty by reason of insanity) for a disqualifying offense in the previous ten-year period. The disqualifying offenses are listed in 49 U.S.C. § 44936(b)(1)(B).

WHAT IS A CONVICTION?

The statute and regulations specify that if an individual was convicted, or found not guilty by reason of insanity, of any disqualifying offense in the preceding ten years, then the individual may not be granted unescorted access authority. We have taken the position that a conviction means any finding of guilt, plea of guilty, plea of nolo contendere, or finding of not guilty by reason of insanity.\(^1\) Whether a disposition of a criminal case is a conviction is a matter of Federal law. In Dickerson v. New Banner Institute, Inc., 460 U.S. 103 (1983), the Supreme Court held that the defendant had been convicted for purposes of a gun control statute even though under state law the defendant’s sentence had been deferred under state law. The key was that the

---

\(^1\) In some cases, a defendant may be advised by a court that they have not entered a plea that constitutes a conviction under state law. In such cases, TSA will not consider the offense to be disqualifying if the applicant can provide sufficient proof of the court’s advice, generally in the form of a certified copy of the court proceeding transcript.
defendant had pled guilty to the state offense and that was all that was required to make the underlying case a conviction for purposes of the Federal gun control statute.

TSA considers the following scenarios to be convictions (this is not an exclusive list):

- Person enters plea of guilty followed by deferred adjudication where court places defendant on probation for a period of 2 years.
- Person enters plea of *nolo contendere* followed by a 2-year period of community supervision.
- Person is found guilty by judge or jury followed by deferred adjudication where court places defendant on probation for period of 2 years.
- Person is arrested and placed on probation pending a trial. The state revokes probation and prosecutes the person and there is a finding of guilt.

TSA considers the following scenarios to not be convictions (this is not an exhaustive list):

- Person is arrested, tried, and acquitted.
- Person is arrested and is placed in a first offender program. Upon successful completion of program, the person is discharged and the charges are dropped.
- Person is arrested and placed on probation pending a trial. Upon successful completion of period of probation, the charges are dropped.

**HOW DOES AN EXPUNGEMENT\(^2\) EFFECT THE CONVICTION?**

A number states allow an individual who has been convicted to seek a judicial order expunging the conviction. Expungements come in a variety of forms, but predominantly fall into two categories: (1) post-probationary period automatic expungements; and (2) post-conviction discretionary expungements.

- As a general rule, where an expungement acts to nullify a conviction and the record of the conviction is maintained by the state only for purposes of sentencing in a subsequent criminal trial, then the expungement acts to nullify the conviction for purposes of the CHRC statute and regulations. If, however, the expungement has conditions on it then the expungement will not act to nullify the conviction for purposes of the CHRC statute and regulations. Some examples of such conditions include the following (not an exhaustive list):
  - Person may not own a firearm based on the conviction.
  - Person may not be hired as a police officer or teacher.
  - Person may not work as a health care provider.

- Therefore, some expungements will remove the disabling effect of the underlying conviction and some expungements do not. Adjudicators should look to the specific provisions of state law through which the expungement was granted. (See attachment A).

**WHAT EFFECT DOES A PARDON HAVE?**

Most states, either through the governor’s office or a state board of pardons and paroles, have the power to grant pardons to persons convicted of a crime. TSA has taken the position

---

\(^2\) For the sake of convenience, expungement, unless otherwise indicated, encompasses both set-asides and expungements.
that all pardons will act to nullify the underlying conviction for purposes of the CHRC statute and regulations.

ARE MISDEMEANOR CONVICTIONS DISQUALIFYING?

Unless otherwise stated in the statute, a misdemeanor conviction would act to disqualify an individual from unescorted access authority. For example, § 44936(b)(1)(B)(xi) specifies “armed or felony unarmed robbery.” (emphasis added) Conversely, § 44936(b)(1)(B)(ix) specifies “unlawful possession, sale, distribution, or manufacture of an explosive or weapon.” This provision encompasses both misdemeanor and felony weapons charges. Recently, the Fourth Circuit Court of Appeals held that a misdemeanor firearm offense does fall within list of disqualifying offenses in section 44936. The case is United States v. Baer, 2003 U.S. App. LEXIS 6023 (4th Cir., 2003).

ARE JUVENILE CRIMINAL RECORDS APPLICABLE?

When a juvenile has been tried as an adult, then the criminal record is applicable. Otherwise, juvenile records should not be considered for purposes of the criminal history records check statute.

FURTHER ASSISTANCE

TSA is committed to working with airports and air carriers to continue to ensure that the statute and regulations are applied fairly and consistently bearing in mind that people’s jobs are at stake but balanced against the goal of ensuring the security of the Nation’s air transportation system. For further assistance, please contact Stephen Brundage, attorney in the Office of Chief Counsel, at (571) 227-2662; email: Stephen.Brundage@dhs.gov

Shaded states have expungements/set-asides that can nullify a conviction.
APPENDIX D: ADDITIONAL STATEMENTS

The statements below were reported by airports as additions to the standard language.

- I will not divulge or reveal to anyone not associated with, and authorized by, the airport any information concerning security, security systems, or security procedures used at the airport.

- An airport ID badge is a privilege.

- The Airport has the authority and makes the final determination whether to grant, deny, or revoke a badge at any time it feels that an individual may jeopardize the Airport Security Program.

- The Airport Manager reserves the right to conduct a further investigation on an individual at the cost of the employer. Fraudulent claims are punishable to the full extent of the law.

- My security identification badge is issued to support my job duties and responsibilities at the airport and should only be used for official business purposes. I will never utilize my security identification badge when off-duty or for personal use.

- The Airport Security Coordinator or designee may deny issuance of an ID badge based on an applicant’s conviction for a non-disqualifying offense if the offense occurred on Airport property and the offense interfered with or threatened the property, safety, comfort, efficiency or security of passengers, employees, tenants or Airport operations. Maximum period of denial under this provision shall be (1) for a misdemeanor conviction, 1 year from the conviction date; (2) for a gross misdemeanor conviction, 3 years from conviction date.

- Persons with a conviction of a Disqualifying Crime shall be ineligible to apply for an ID badge for at least 12 months from the date of release from imprisonment for a Disqualifying Crime.

- Any person applying for an ID badge who is charged with a Disqualifying Crime and awaiting a final judicial disposition will be denied issuance of an ID badge until a final judicial disposition is made. If you have any outstanding warrants, your badge will not be issued until the warrant is handled (within 30 days).

- The airport, or its designated representatives may release any or all of the above information and/or records, or any other records or information it may have about me, to any law enforcement or other governmental agency which the airport, in its sole discretion, believes has a need to know. I hereby release and discharge the airport, its employees, agents, clients, and customers from any and all liability, claim, damage, or cause of action which may arise directly from or out of their compliance with the requests and authorizations herein.

- I acknowledge that I work in a position of trust and that if I misuse my badging privileges to circumvent any security system, measure or procedure including smuggling of contraband or dangerous devices, I will be subject to civil and criminal sanctions, including revocation of my badge and access privileges.

- I understand that any false or misleading information on this application may be cause for this application to be disapproved or for any permit or ID badge issued as a result to be revoked. I specifically authorize the airport, or its designated representatives, to investigate me and my background and my activities in any lawful manner and to any extent that the airport, in its sole discretion, deems from time to time advisable. This may include, but is not limited to, contact with former employers, contact with my present employer, my co-workers, additional criminal history checks, including but not limited to non-fingerprint-based state and local records and
litigation checks. I understand that the reason for these investigations is for security purposes and that had I not consented to and authorized the same, I would not be granted an ID badge and the privileges associated therewith, nor would my application for the same be processed and/or considered and the processing and/or consideration of my application for an airport ID badge is bargained for consideration, the receipt and sufficiency of which is hereby acknowledged.
APPENDIX E: ADJUDICATION RESOURCES AND STATE PENAL CODES

Since adjudication of a crime frequently requires a comparison of state and federal criminal statutes, finding the applicable provisions of state law is essential to the process. When reviewing conviction information, the examiner should analyze the law in place at the time the offense was committed.

There are several resources available to assist airports and air carriers in understanding and interpreting disposition codes. For example, Larry Henry and Derek Hinton wrote The Criminal Records Manual: 3rd Edition: Criminal Records in America: A Complete Guide to Legal, Ethical, and Public Policy Issues and Restrictions in September 2008. The book provides a useful appendix with definitions of disposition codes. The US Courts website also has a glossary of legal terms, which can be used during the adjudication process: www.uscourts.gov/glossary.

Most legal professionals will research statutes by utilizing proprietary search tools like:

Westlaw  legalsolutions.thomsonreuters.com/law-products/westlaw-legal-research/

These subscription-based web tools operated by private services are the most effective and accurate way to search code sections. The services often offer training in how to conduct the kinds of searches that would be necessary to compare a state criminal statute to a federal one.

Using these services, a researcher can access the relevant sections of a jurisdiction’s criminal code in effect at the time a crime was committed—that is, the operative time for the purpose of determining the elements of a crime upon which a conviction is based. Use of these systems by trained personnel (preferably by lawyers, paralegals, law enforcement personnel, or others trained in statutory interpretation) is the optimal way to accurately assess a conviction for comparison to the relevant federal statute for a disqualifying crime. Check with your airport’s legal counsel or media departments to see if the airport already subscribes to LexisNexis or Westlaw to save on subscription costs.

While subscription services like those outlined above are the best way to find the relevant legal standards, there are some publicly accessible collections of state criminal codes. Table E-1 below is a guide to public collections of criminal statutes maintained by state governments. The relevant statute/code provisions regarding criminal law are noted and a hyperlink to code sections is provided.

These collections are most often maintained by a state’s legislative body. In some states, the court system maintains these compilations. Some of the collections are maintained by contract providers, like LexisNexis, at the direction of a state government.

In some states, the sites are deemed the official citation for laws, and in others the website notes that they are not the official citation. These free public sites may also be limited in providing information about changes to the statute over time. While the statutes are accurate in outlining the current state of the law, they are frequently less informative about the elements of a crime at the time of convictions. While most provisions of the criminal law do not fluctuate radically, there may be changes over time that would affect comparability to federal laws.

The table below is a useful resource for checking penal codes from other states. Since they can change frequently, specific examples of each penal code are not included in this guidebook. Airports and air carriers may want to consider having a resource developed specifically for their region that covers the areas most commonly found on an IdHS. If a resource document is developed, it must be regularly updated.

ICAO

The International Civil Aviation Organization (ICAO) adopts Standards and Recommended Practices (SARP) concerning the prevention of acts of unlawful interference to civil aviation. The formulation and adoption of SARPs for international aviation is incorporated into 19 technical annexes. ICAO’s measures to prevent and suppress all acts of unlawful interference against international aviation are designated in Annex 17, which states, in part, that:

3.4.1 Each Contracting State shall ensure that the persons implementing security controls are subject to background checks and selection procedures.

4.2.4 Each Contracting State shall ensure that background checks are conducted on persons other than passengers granted unescorted access to security restricted areas of the airport prior to granting access to security restricted areas.

The two Standards discussed above are mandatory requirements for each Contracting State (country) that is a signatory to ICAO. Along with SARPs, ICAO also issues guidance material on how to implement their requirements. That guidance appears in ICAO Aviation Security Manual, DOC 8973, which is a restricted document.
APPENDIX F: ADJUDICATION TRAINING

Many new adjudication staff members are shown how to complete their tasks but are not told why they need to complete a specific task in a particular way. As a result, they may in good faith change a process, and by doing so later discover they are not in regulatory compliance.

Many new adjudicators are fearful of making a mistake in the adjudication process as they lack confidence in their knowledge of the regulations or understanding of the information in an IdHS. TSA regulations and SDs are subject to updates and contain extensive information that often requires clarification, so it is important for adjudicating staff to fully understand the requirements and ensure that they are applying the regulations correctly.

Research shows that there are no specific CHRC adjudication training classes available to airport and air carrier staff. However, airports and air carriers do have access to a range of formal training options that provide valuable context and knowledge to support the adjudication process. Many options are available through industry associations or federal agencies, with topics including:

- Trusted Agent training
- ASC training
- Handling of SSI/PII
- Fraudulent Documentation and Imposter Recognition

Informal or on-the-job training is also an important resource available to new staff, as it often offers practical insight into the role of the adjudicator by adding a better understanding of the local environment. Airports might consider exposing adjudicating staff to discussions with their local law enforcement agencies and legal counsel to better understand state penal codes, common criminal records codes, and how to read court documentation.

Arranging for staff to visit other airport credentialing offices or law enforcement entities that perform similar adjudication tasks can prove invaluable in enhancing training, developing a local support network, and sharing best practices.

On-the-job training curricula for new adjudicators need to be documented and tailored to local airport or air carrier circumstances. Adjudication training should be provided by experienced adjudication staff or by the ASC.

A suggested training checklist for adjudicating staff is included below and can be modified as needed.

In addition to training adjudicating staff, training for Authorized Signatories is also important. One airport surveyed provides documentation training annually to the Authorized Signatory community to help them maintain their vigilance and competency in document validation. This program was well received and has the added benefit of improving communication between the credentialing office and the Authorized Signatories.
Training Checklist

    - Security Director
    - Attorney, LEO, or other
- Appeals process, when applicable
- Recurrent CHRC adjudication and appeal process
- Rap Back adjudication and appeal process
- Properly secure adjudicated records, limiting access to Trusted Agents with a need-to-know
APPENDIX G: GOVERNMENT AND OUTSIDE ENTITIES

GOVERNMENT

The government sector employs a wide variety of tactics to determine the suitability of employees for hire.

One of the distinct differences in vetting employees for the public sector or government versus the private sector is the fact that government employees are part of a system of public trust. These positions are often enforcement or regulatory in nature and have a great deal of latitude when determining outcomes of programs, funding, rulemaking, and enforcement. Another difference is that government often hires for careers, meaning that they expect to have these employees until they are eligible to retire—careers of 20 plus years are not unusual.

Positions involving the enforcement of laws, courts, and specific regulatory enforcement employ the following considerations in their vetting process:

- Psychological screening
- Character suitability, involving the following ten established factors of conduct:
  - Intoxicant use and frequency
  - Illegal drug use
  - Financial irresponsibility
  - Criminal and antisocial conduct
  - Dishonesty (including by act of omission)
  - Disruptive or violent behavior
  - Employment misconduct and negligence
  - Firearms and weapons violations
  - Statutory debarment
  - Miscellaneous agency-specific requirements

The value of psychological screening and character suitability extends to positions of great trust, high responsibility, critical decision-making, safety, and the enforcement of laws and rules.

It is worth noting that OPM takes a much broader view of suitability than just convictions. OPM conducts the majority of the background checks for the private sector when a government contract requires a clearance level that includes a fingerprint-based CHRC. The difference with OPM checks is that they take a number of factors into account when determining an applicant’s suitability. These additional factors include how recent the conduct was, the severity of the offense, rehabilitation, and frequency of criminal conduct. Aviation checks, on the other hand, are simply either “yes” or “no” based on a conviction for one of the enumerated crimes within the look-back period.

If an airport or air carrier decides to include suitability requirements to supplement the TSA CHRC requirements, the additional considerations below could be helpful in determining whether an individual should be granted access to Secured Areas of the airport. The challenge is that this kind of review takes significantly more skilled vetting resources than the current system.

OPM and the private entities interviewed (e.g., banks and pharmacies) use suitability and pattern behavior factors in addition to the CHRC. Examples of suitability factors include:

- Misconduct or negligence in employment
- Criminal or dishonest conduct
• Material, intentional false statement, or deception or fraud in examination or appointment
• Alcohol abuse, without evidence of substantial rehabilitation, of a nature and duration that suggests that the applicant or appointee would be prevented from performing the duties of the position in question, or would constitute a direct threat to the property or safety of the applicant, appointee, or others
• Illegal use of narcotics, drugs, or other controlled substances without evidence of substantial rehabilitation
• Knowing and willful engagement in acts or activities designed to overthrow the US Government by force
• Any statutory or regulatory bar that prevents the lawful employment of the person involved in the position in question

OPM and agencies must consider any of the following additional considerations to the extent OPM or the relevant agency, in its sole discretion, deems any of them pertinent to the individual case:

• Nature of the position for which the person is applying or in which the person is employed
• Nature and seriousness of the conduct
• Circumstances surrounding the conduct
• Time of the conduct
• Age of the person involved at the time of the conduct
• Contributing societal conditions
• Absence or presence of rehabilitation or efforts toward rehabilitation

Airports could consider increasing the vetting procedures based on the type of airport ID badge the applicant is applying for, regardless of whether the applicant has a record. This approach would assist in reducing potential risks from badge holders working in Secured Areas and is specifically mentioned in federal regulations as an option for airport operators.

OTHER INDUSTRIES

Eight other industry case studies were conducted. Several of the organizations interviewed requested that their organization not be publicly identified to prevent potential applicants from having in-depth knowledge of their vetting policies. The industries reviewed included law enforcement agencies, the medical industry, and the transportation industry.

When using suitability determination factors in approving a background check, non-aviation entities tend to base the suitability determination factors on the type of position and level of trust. In addition, the look-back period is based on position requirements. If an applicant was convicted of a felony on the disqualifying crimes list but the look-back period has passed, suitability is still determined based on position requirements and may be denied.

Law enforcement entities that were interviewed follow suitability determination measures as discussed above, and include others, for example:

• Verification of date and place of birth
• Verification of education
• Verification of employment for last 10 years or since 18th birthday
• Interviews of five references
• Traffic/criminal record checks of police departments, state’s attorneys, sheriff’s offices, and circuit clerks where the applicant has lived, worked, or attended school
- Verification of military discharge status
- Computer checks of immediate family
- Credit checks
- Verification of place of residence for last 10 years
- Verification of professional licenses
- Personal interview
- Interview of spouse (not mandatory)
- Review of Department of Corrections inmate log
- Review social networking sites

The process for conducting background investigations in other industries spans a wide spectrum. Individual sectors and trade organizations such as ASIS International, which is a global community of security practitioners, have made recommendations on standards or best practices.

The following are best practices employed across industries such as pharmaceuticals, banking/securities, telecommunications, and media, as well as private companies in any industry. Most of these best practices are involved in pre-employment screening, rather than the vetting that is done once a person is hired and applies for a security badge. The most significant factors to consider are the time, personnel, and costs associated with implementing these measures.

**Fingerprint-Based CHRC**

Fingerprint-based CHRCs verify felonies and misdemeanors at the federal, state, and local levels. The value of a fingerprint-based CHRC is that it is a relatively easy process, and provides an objective analysis of a person's past actions. This can be measured against clear standards and, if applied uniformly, offers a consistent measure between individuals.

Some of the challenges with this practice are the specific training needed to adjudicate records and the ability to reconcile charges between various jurisdictions. Individual states and territories often have different levels or classifications of crimes, different penalties for these crimes, and report these crimes differently to databases. Therefore, determining whether an arrest led to an eventual conviction can often be confusing. To magnify the confusion, many charges can be plea-bargained, reduced, deferred, dismissed, or enhanced based upon a variety of factors.

**Credit Checks**

A credit check includes the amount of debt an applicant holds and is often considered a pre-employment screening tool. The value of this process focuses on decision-making; having a large burden of debt generally limits an individual’s choices and may make them vulnerable to poor decision-making or compromise in the future.

**Employment Verification**

Verification of work history is best suited to pre-employment screening, but generally shows consistency in how people conduct their lives. The verification has a high value and demonstrates the stability of a person’s life and decision-making abilities. Employment verification is best suited to determine patterns of behavior and may establish the authenticity of an applicant. Some challenges using this as a tool include factoring external forces beyond the control of applicants, such as injury, illness, personal circumstances, or economic conditions. Additionally, age, geographic location, and education are factors that influence employment history.
Education Verification
Verification of transcripts and grades is a relatively simple process. It has value in establishing a consistent pattern of behavior and confirms the veracity of an applicant. While simple, it is potentially a time-consuming process and may not have an obvious connection to many positions or types of work. This is also an area that is more suited to pre-employment screening.

Travel Abroad
When considering someone’s past travel abroad, take into account their travel destinations, reasons for travel, and frequency of travel. This has limited value for most types of employment but may be considered as a pre-employment screening tool for some positions.

Drug Testing
Pre-employment and ongoing/random testing may be a valuable screening tool, and may be related to criminal conduct, safety, and credibility. This process is expensive and can be fraught with legal exposure and challenges.

Social Media
Using social media to support the evaluation of an applicant’s suitability for an airport ID badge was not mentioned by any of the airports or air carriers that were interviewed.

Review of social media forums must be evaluated carefully due to legal restrictions. This is probably the most controversial and least developed tool of pre-employment screening in security-sensitive industries. It is a developing and evolving area, and the technologies are outpacing how this can or should be used when evaluating candidates and measuring risk. This is also dependent on the age of a person, what media platforms they utilize, what they use each for, how often each is used, and the boundaries of free speech.

Some industries complete social media checks as part of their employment vetting procedures, conducting a basic internet search for any information about the candidate—without requesting username or password, which is prohibited in several states. The challenge in reviewing social media is how do you know that the “John Smith” you have found is the same “John Smith” applying for employment or an airport ID badge? Also, how are you able to verify that the information posted is accurate?

Airports and air carriers are looking for ways to protect against potential insider threats. While checking news media or social media may seem like a promising tool, there are many questions concerning how this could be applied. It would be important to apply the same criteria to all applicants, and essential to consult with legal counsel before implementing any social media checks.

REGULATIONS COMPARED
Table G-1 shows a comparison matrix of disqualifying crimes and potential suitability disqualifiers as defined by the TSA, CBP, OPM, United States Postal Service (USPS), Transportation Worker Identity Credential (TWIC), international agencies, and non-aviation industries. This information was gathered from literature review and case studies performed by the authors.

Interviews with other industries were used to help gather real-world perspectives, procedures, and methods currently used or under consideration. The case studies targeted other industries where innovation has been applied or where valuable lessons were learned. These industries included a public transit agency, law enforcement agencies, private sector organizations serving the federal government, a state government agency, the medical industry, public organizations, and OPM. Disqualifying crimes and suitability disqualifiers are included in the comparison matrix below.

† Information gathered from case studies  
‡ Potential suitability disqualifiers in other industries

Items marked with a (†) in Table G-1 are used as potential suitability disqualifiers in some other industries, including USPS. These potential suitability disqualifiers are adjudications of character and conduct that may impact the integrity or efficiency of the organization or agency.
